

— THE POCKET PROMPT CARD

BRIEF IT LIKE A GOOD HELPER

A good prompt is just a good request, the kind you'd give a capable new volunteer. Include these five things and you'll get something useful the first time.

ROLE	GOAL	CONTEXT	RULES	OUTPUT
Who should it act as?	What do you want done?	What does it need to know?	What to avoid or keep?	What should it look like?

INGREDIENT	EXAMPLE
Role	"Act as the communications volunteer for our church..."
Goal	"...write a bulletin announcement for the fall food drive."
Context	"It runs Oct 5 to 19. Drop-off is the church lobby. Canned goods and diapers are most needed."
Rules	"Warm, under 80 words. Don't invent details. Tag anything missing with [CONFIRM]."
Output	"One bulletin version and one 20-second version to read aloud."

ALL TOGETHER

"Act as the communications volunteer for our church. Write a bulletin announcement for the fall food drive. It runs Oct 5 to 19, drop-off is the church lobby, and canned goods and diapers are most needed. Keep it warm and under 80 words, don't invent details, and tag anything missing with [CONFIRM]. Give me a bulletin version and a 20-second version to read aloud."

THREE HABITS THAT MATTER MORE THAN WORDING

READ IT, FIX IT, ASK AGAIN

The first answer is a draft. Tell it what to change: "warmer", "shorter", "you forgot the parking info".

ASK IT TO FLAG WHAT IT DOESN'T KNOW

"Tag anything missing with [CONFIRM]" stops it from filling gaps with confident guesses.

NOTHING LEAVES WITHOUT YOUR YES

All drafts; people decide. You read every word before it's sent, printed, or posted. Brilliance Labs calls this standing "at the gate".

SAVE WHAT WORKS

A prompt that worked once is a tool you can reuse every week. Keep a note of your best ones, or start from the Ministry Prompt Library.

— SAFETY TRAFFIC LIGHT

GREEN, YELLOW, RED

**GREEN: GO AHEAD**

Brainstorming · rewording · summarizing · meeting agendas · checklists · training sheets · planning.

**YELLOW: USE IT, BUT REVIEW EVERY WORD**

Anything the congregation or public will see: bulletins, emails, social posts, donor letters, grant answers, policies, translations. Anything about money or volunteers.

**RED: AI CAN HELP YOU PREPARE, NEVER DO THE WORK ITSELF**

Crisis pastoral conversations · worship, baptism and communion, and prayer with another person · final Scripture or theological content · discerning God's will · decisions about people (hiring, benevolence, discipline, membership).

BEFORE YOU PASTE, PAUSE. Would you hand this to a volunteer you met this morning? Never paste details about **minors, individual giving, health, pastoral counseling, immigration status, or membership decisions**. Take out names and specifics, or use a tool your ministry has approved for that data.

THE FOUR-QUESTION FILTER

From Brilliance Labs' *Christ-Centered Framework for Using AI*: every idea passes through four questions before any AI work begins.

- | | |
|---|---|
| 01 Is this for God's glory?
Does it point to him, or quietly recenter us? | 02 Is this what God is calling us to do?
Or did urgency, opportunity, or capability pull us in? |
| 03 Is this loving to our neighbor?
Does it serve people, and protect those who could be harmed or left behind? | 04 Are we stewarding this faithfully?
Resources, attention, the tool itself, and what it can see and remember. |

Read the whole framework, including the Four Anchors and the Discernment Flow, at brilliancecelabs.org/aiframework.

— AI OPPORTUNITY WORKSHEET

FIND YOUR FIRST USE

Don't start with the technology. Start with the work that wears you down. Fill this in before you leave, if you can.

STEP 1 · BRAINSTORM

What do I write every week?

What do I explain over and over?

What do people keep asking the office?

What do I copy between places?

Where do things stall or get forgotten?

What keeps me from people, prayer, or rest?

STEP 2 · SCORE YOUR TOP THREE (1 = NO, 3 = VERY)

TASK	REPETITIVE?	MOSTLY WORDS?	EASY TO CHECK?	TOTAL

The highest total is your best first experiment. "Easy to check" matters most: it means a mistake can't hurt anyone. Then run it through the traffic light and the Four-Question Filter on page 2.

STEP 3 · COMMIT

My first experiment is _____

I'll try it by _____ and tell _____ how it went.

— BUILDING WITH CLAUDE CODE

YOU CAN BUILD THINGS NOW

Today you used **skills**: ready-made recipes Claude follows. Each one asks you a few questions and then builds something real. Start Claude Code in the class folder and type one:

TYPE THIS	WHAT YOU GET
<code>/brilliance-ui</code>	A web page in the Brilliance Labs style: an event, a ministry homepage, a sign-up page
<code>/ui-scraper</code>	The look of any website you like, captured as a style kit you can build with
<code>/finance-dashboard</code>	A dashboard and plain-English takeaways from a folder of spreadsheets
<code>/ministry-email</code>	Email campaigns with a schedule and previews (demo mode: nothing is sent)
<code>/prompt-coach</code>	Help picking and filling in the right prompt from the Ministry Prompt Library
<code>/dev-setup-mac</code> <code>/dev-setup-windows</code>	A full set of developer tools, plus starter apps, with no typing

THINGS YOU CAN SAY

- | | |
|--------------------------------|---|
| "Make the headline bigger." | "Undo that." |
| "Make it sound warmer." | "Show me the page again." |
| "Use green instead of orange." | "Explain this chart like I'm on the finance committee." |
| "What did you just do?" | "I'm stuck. What should I try next?" |

GOOD TO KNOW

- Click an answer when Claude asks a question, or choose "Other" and type your own.
- Everything you make is saved in the **my-projects** folder.
- Anything in [square brackets] is a placeholder for you to fill in.

KEEP GOING AT HOME

- Install Claude Code, open the class folder, and type `/dev-setup-mac` or `/dev-setup-windows`.
- Then ask: "Show me my Python app." It's a small dashboard in the Brilliance style.

— YOUR FIRST 30 DAYS

FIX ONE PAINFUL HOUR

Don't transform the ministry. Pick one task and make it lighter.

- ☐ **Week 1: Spot it.** Pick one repetitive, low-risk task from your worksheet.
- ☐ **Week 2: Try it.** Draft it with AI using a prompt from the library. Compare it with doing it by hand.
- ☐ **Week 3: Save it.** Keep the prompt that worked. Now it's a tool anyone on your team can use.
- ☐ **Week 4: Weigh it.** Did it save time? Was it good enough? What did it free you for, and what did it take? Keep it, change it, or drop it.

TASK	TIME BEFORE	TIME AFTER	GOOD ENOUGH?

GETTING STARTED

- Open ChatGPT, Claude, or the AI in the Microsoft or Google apps you already use. Free versions are fine for learning.
- Type your request in plain English, like a note to a capable volunteer.
- Read it, fix it, ask again.
- Pause before you paste (page 2).

If you can write an email, you can do this.

BEFORE YOU PAY FOR AN AI TOOL

- ☐ What specific problem does it solve, and how often do we have it?
- ☐ Who reviews what it produces before it's used?
- ☐ What can it see and remember? Where does our data go?
- ☐ Can we get our data out if we leave?
- ☐ What's the real cost per person? Is there a nonprofit or church discount?
